## CabinetSense Wiki

### Preview Machining

Preview Machining overlays the cnc drillpoints on your component. This allows you to verify that the cabinet will be produced as expected.

NOTE:

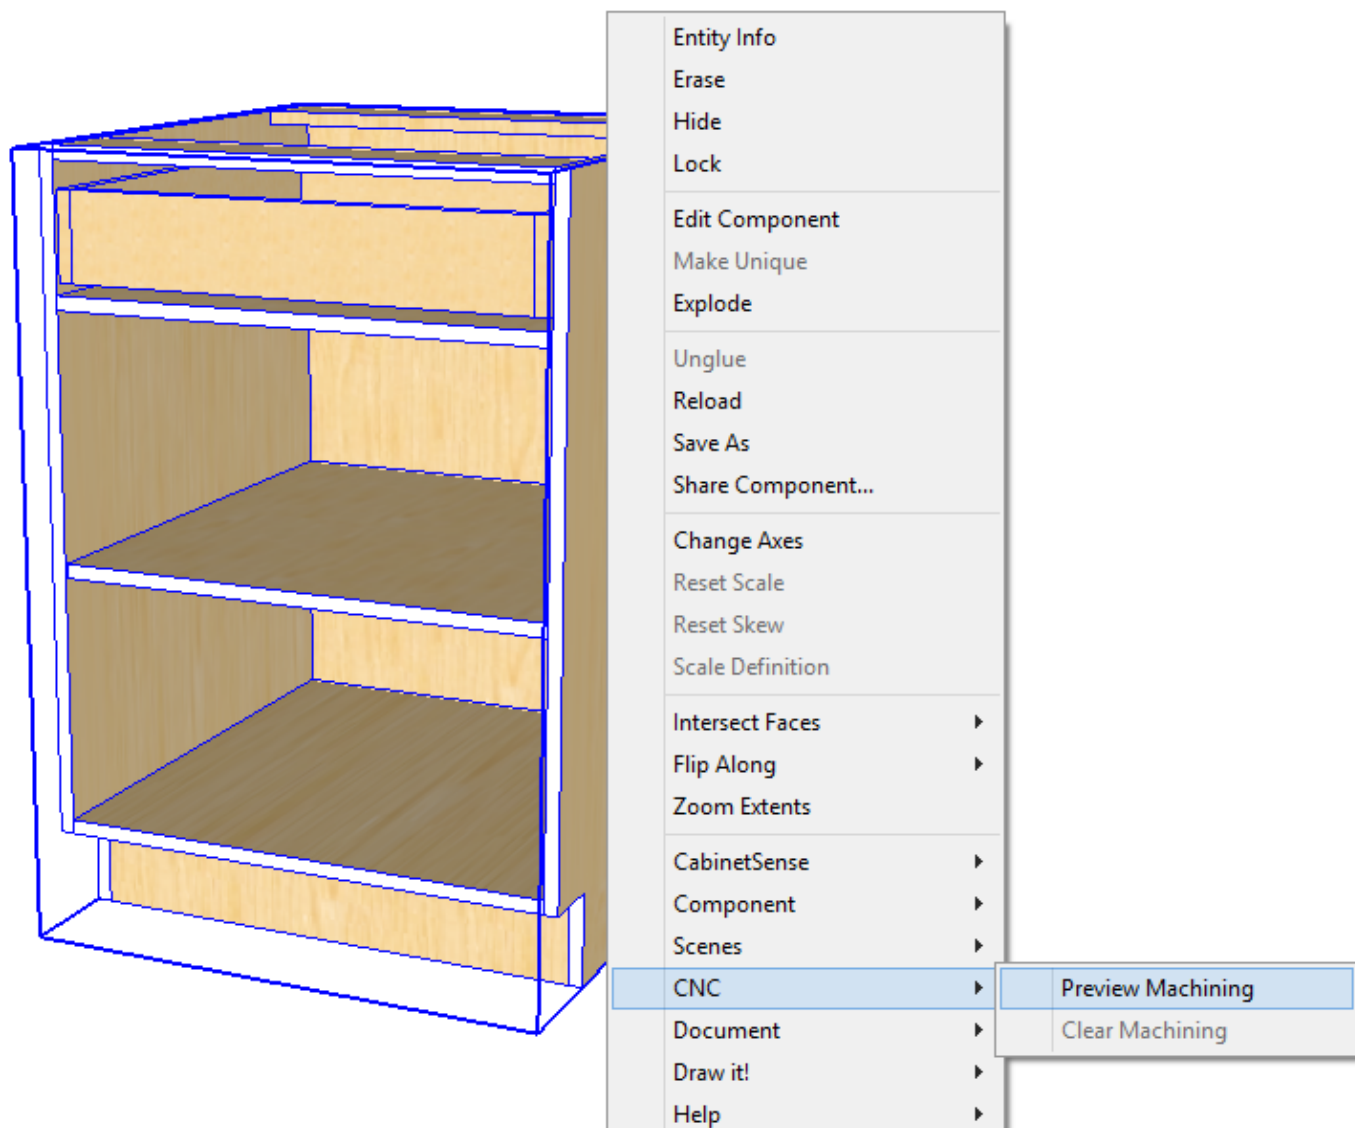

- By Default, preview does not provide 3D rendering for the holes. You can control this option in the [preferences](#).
- Preview does not provide any information for dadoes, blind dadoes or lock rabbets.

- CNC options are only available if you have the CNC version of CabinetSense

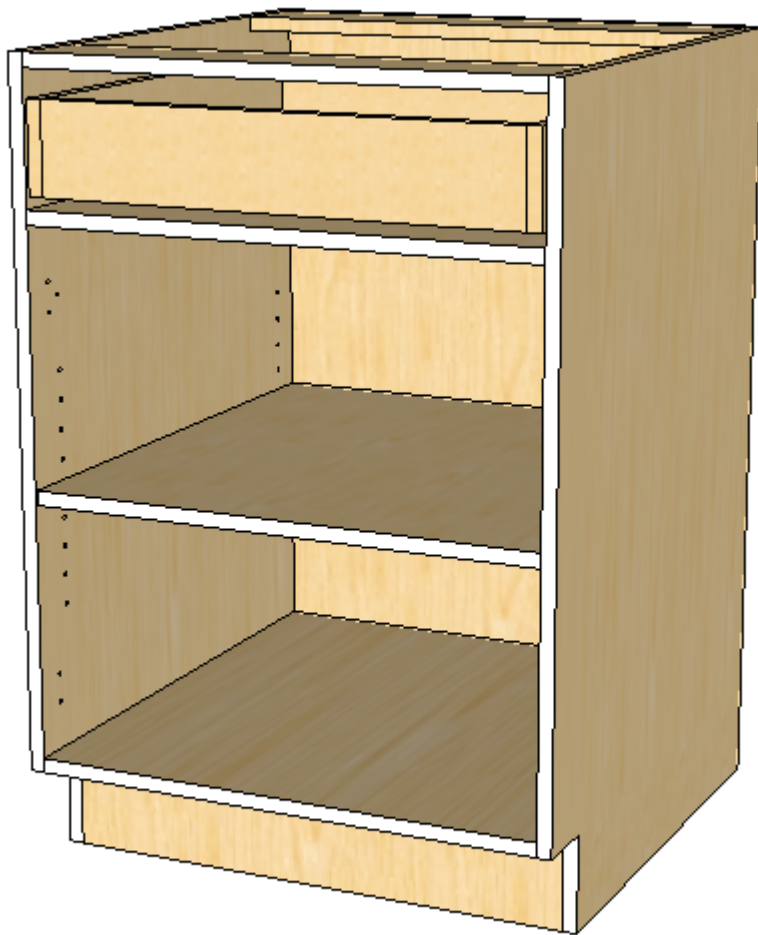

Usage:

- Single Component

**... Request a Preview ...**

**... After Preview ...**

... Turning on Wireframe allows you to see the hidden CNC Drillpoints ...
