## [CabinetSense Wiki](#)

### Bulk Copy

Bulk Copy simplifies your life when you want to create a new set of machining instructions that is different from your day to day method of building cabinets. Let's suppose that you won a job that requires you to build cabinets using machining standards that are different from what you typically use. You could re-enter all of the machining manually, or you could copy your standard templates and then modify only the portion that is different. See [machining template](#) for more information.

Layers	Hole Locations	Dadoes	Drilling	Hinging	Line Boring	Drawer Box	Door Machining	Bulk Copy
--------	----------------	--------	----------	---------	-------------	------------	----------------	-----------

Template:

Action

☐ Copy

☐ Rename

☐ Delete

New Template:

Go

- Template: Displays all of the different template names that are stored in your machining database.
- Action:
  - Copy: Allows you to copy all of the machining instructions with the selected template and duplicates them. All of the duplicated information will be given the New Template name.
  - Rename: Allows you to change the template name of the machining instructions for the selected template to the New Template name.
  - Delete: Deletes all of the machining instructions for the selected template. You will be asked to confirm your delete request prior to CabinetSense deleting your data.
- New Template: The new name to use when the copy or rename action is used.
