[CabinetSense Wiki](#)

A panel is very similar to the door component except that it is external to a cabinet. It can be scaled to whatever dimension you need and it can split itself into multiple panels automatically based on its property settings. A typical use of a panel is to clad the back of an island.

Unique Properties

Two properties that a panel has that you will not find on a door are:

Panel

Opens on	Fixed
Opening Mechanism	Hinge
Construction Style	Rail Between Stiles
Style	5 Piece
Panel Grain Direction	Height (Z)
	----- Handle -----
Location	Top
Side Margin	0 mm
Top/Bottom Margin	0 mm
# Handles	One
Type	None
	----- Material -----
Material	Millwork
Type	Lumber
	----- Panel Insert -----
Ideal Width	350 mm
Inset	6 mm
Columns	1
Rows	1

Construction Style:

- Rail between Stiles: This is how the door components is constructed
- Stile Between Rails: This construction method is better suited for wall panel applications

Ideal Width: enter the maximum width that you want your panel inserts to be. The panel will subdivide itself automatically when appropriate. Enter zero (0) if you do not want this behavior.
