Toggle Closet Backs

Closets can be designed with backs or no backs (or a combination). There is a new function that allows you to easily change all cabinets (or only the selected cabinets) to have backs or not.

You will find the new option under the CabinetSense>Component>Toggle Closet Backs,

What it does: It looks for all container cabinets directly inside the closet cabinet and changes those backs on or off as directed.

NOTE: This function is expressly written for the closet design strategy that CabinetSense has built into this release and may not work for the way that you ultimately build your closets
