CabinetSense Wiki

Choose New Drawer System

This dialog allows you to easily make knowledgeable decisions on replacing drawer systems in your model. CabinetSense will review the selected components and provide you with a summary of all the different drawer systems. It also differentiates between regular and pullout drawers.

Usage:

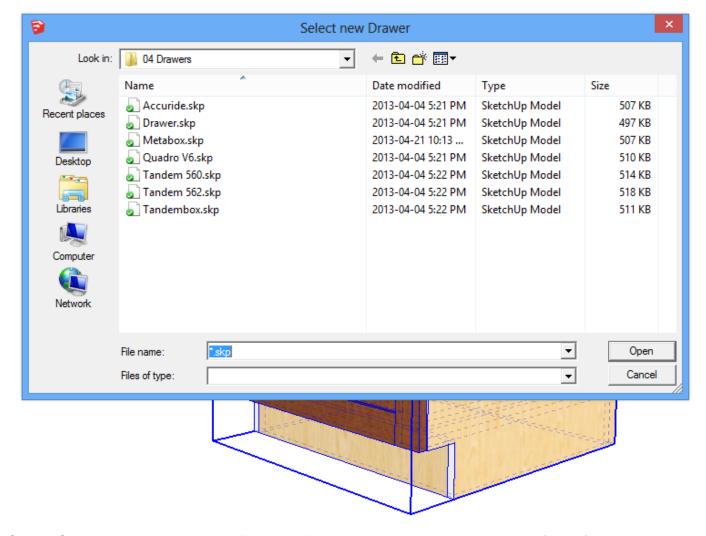

• multiple Components

... Example ...

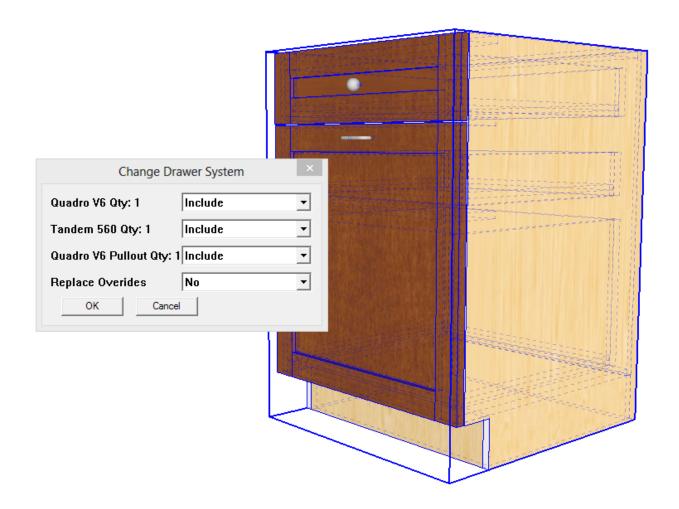

... Select the new Drawer System ...

Navigate to the components folder where you keep your CabinetSense Drawers and select the drawer system that you wish to use.

CabinetSense presents you with a dialog detailing the current drawer boxes that it found for your selected cabinets.

In the following example, this cabinet has two regular drawers and one pullout. Notice how CabinetSense details the types of drawer systems it found, the quantity of each and the separation of regular drawers from pullouts.

The default is to change all drawer systems found to the newly selected drawer system. You may overide this by changing the option to "Exclude" for any of the drawer systems listed.

Replace Overides:

- You can choose to keep or replace the current drawer box Height or Length overides that are with the current drawers.
- The default is to leave any overides in place as you typically specify those for specific reasons for the design that you are working on.
