CabinetSense Wiki

Change Prefix

The Change Prefix request allows you to change some or all of your comonents part number prefix.

CabinetSense will handle multiple prefixes in you model separately with each prefix being assigned numbers starting from 1 (one). You may consider using this when:

- you have multiple rooms in your model and you would like to have separate numbering for each room.

- You have an island that you wish to number separately from the main run of cabinets.
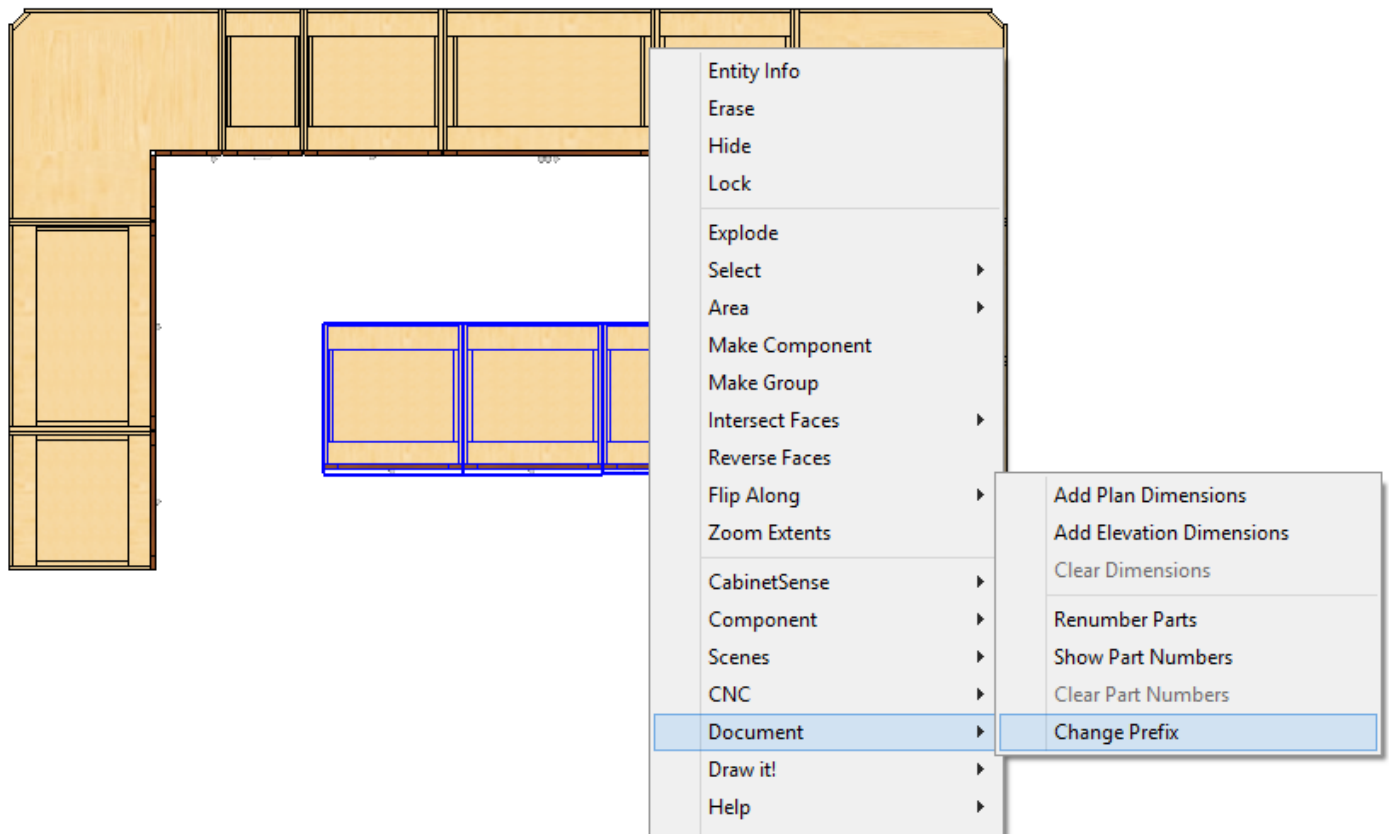

Usage: One or more components must be selected.

... Example ...

... requesting a new prefix for the Island ...

(notice that the 3 island cabinets have been selected)
